**RE-ARRANGEMENT OF THE GRADES AND RATES OF PAY OF  
DISTRICT AND SESSIONS JUDGES IN BENGAL.**

**RESOLUTION No. 4578A.**

**APPOINTMENT.**

*Dated Calcutta, the 30th November 1900.*

**READ—**

Letters to the Government of India in the Home Department, Nos. 156A.—D., 267A.—D., and 334A.—D., dated the 15th May 1897, the 5th June 1897 and the 19th June 1897, respectively, submitting certain letters and memorials representing the necessity of measures for improving the position of the Judicial Service in Bengal.

Letter No. 891, dated the 19th June 1899, from the Government of India in the Home Department, asking this Government to consider the question of the redistribution of the grades and salaries of the District and Sessions Judges in Bengal.

Letter No. 355A., dated the 18th January 1900, to the Government of India in the Home Department, submitting a report on the subject.

Letter No. 913, dated the 27th June 1900, from the Government of India, Home Department, forwarding a copy of the correspondence with Her Majesty's Secretary of State for India on the subject, and directing that the scheme sanctioned by the Secretary of State may be introduced as soon as the Provincial Revenues are in a position to bear the additional expenditure.

In 1897 certain District and Sessions Judges in Bengal submitted memorials praying for the improvement of the Judicial Branch of the Indian Civil Service. In transmitting the memorials to the Government of India this Government suggested the advisability of providing a few appointments for the members of the Judicial Service with higher pay than that of the present first grade of District and Sessions Judges, in order to place them more on an equality with officers of the Executive Branch.

2. The proposals were laid in due course before the Secretary of State, and he has now sanctioned the following re-arrangement of the grades and rates of pay of District and Sessions Judges in Bengal:—

					Rs.
3	first grade	District and Sessions Judges on	...	...	3,000
14	second grade	ditto ditto	...	...	2,500
16	third grade	ditto ditto	...	...	2,000
—					
33					
—					

The total number includes the Superintendent and Remembrancer of Legal Affairs, and the Judicial Commissioner of Chota Nagpur. One of the conditions under which the scheme has been sanctioned is that these two appointments are not attached to any particular grade, but may be held by an officer of any grade. Another condition is that promotion to the highest grade on Rs. 3,000 will go by merit, rather than by seniority.

3. In compliance with these orders, the Lieutenant-Governor is pleased to give effect to this re-arrangement from the 1st October 1900 and to appoint the following officers to the first grade:—

- (1) The Hon'ble Behari Lal Gupta, who will continue to hold the post of Superintendent and Remembrancer of Legal Affairs.
- (2) Mr. F. B. Taylor, who will continue to hold the post of Judicial Commissioner, Chota Nagpur.
- (3) Mr. A. E. Staley, District and Sessions Judge of Muzaffarpur, on privilege leave.

4. The number of appointments sanctioned for the second grade is 14. This included the appointment of District Judge, Sylhet, which was transferred to Assam and was held by Mr. D. Cameron. So long as Mr. Cameron remained in Assam, the number of appointments in the second grade in

Bengal was 13 and the number in the third grade 17. The second grade, therefore, consisted of the following 13 officers:—

| (17) | „ J. H. Temple         | ... | District and Sessions Judge, on furlough.  |

6. The above statement shows the names of the officers who were in the different grades as they stood on the 1st October 1900. Mr. D. Cameron reverted to Bengal on the 7th November 1900, and from that date, the number of appointments in the second grade should be held to be 14, and that in the third grade, 16, as sanctioned by the Secretary of State. Mr. Cameron should be held to have absorbed the additional appointment in the second grade, and, to admit of the reduction in the third grade, Mr. J. H. Temple, the junior substantive Judge, should be held to have reverted from that grade to the third grade of Magistrates.

RESOLVED.—That the Resolution be published in the *Calcutta Gazette*, and that copies be forwarded to each officer concerned for information, and to the Financial Department of this Government for information and for communication to the Accountant-General, Bengal.

By order of the Lieutenant-Governor of Bengal,

J. A. BOURDILLON,  
Chief Secy. to the Govt. of Bengal.

The mean pressure of the seven days ... .. 29.945

The average pressure of the corresponding period for 24 years, Surveyor-General's Office ... .. 29.006

The total number of hours of bright sunshine ... .. 54.0

The maximum possible number of hours of sunshine ... .. 76.0

The mean temperature of the seven days ... .. 69.6

The average temperature of the corresponding period for 24 years, Surveyor-General's Office ... .. 71.3

The extreme variation of temperature ... .. 25.8

The maximum temperature ... .. 82.9

The highest velocity of the wind in one hour ... .. 10

The mean relative humidity ... .. 76

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office ... .. 71

The total fall of rain from 25th November to 1st December 1900 ... .. Nil

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. Nil

The total fall from 1st January to 1st December 1900 ... .. 89.27

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 65.15

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

#### *Note on the early cotton crop of Bengal, 1900.*

*Explanatory.*—This report gives the estimates of the area and outturn of the early cotton crop which is sown during the rains and is harvested in the cold weather. A forecast of the late cotton crop of the Province will be published in February next.

2. *Character of the season.*—The rainfall in July was, on the whole, well distributed, and was fairly continuous over the greater part of the Province. In the Burdwan and Chota Nagpur Divisions, however, it was much in defect, while in North and East Bengal it exceeded the normal. In August the fall was irregularly distributed, and was more or less in defect everywhere, except in Orissa and the adjacent districts. The fall was much more copious and general in September, and in the Burdwan, Presidency, and the Orissa Divisions it was exceptionally heavy. Rain early in October is said to have injured the crop in the Chittagong Hill Tracts, but the fall in that month was below the normal in most parts of the Province. The season was, taken altogether, unfavourable to this crop.

3. *Area sown.*—From the annexed abstract of the district returns, it will be seen that the normal area under the early cotton crop in this Province is 89,800 acres. The area actually sown this year is estimated at 86,200 acres as against 87,600 acres sown last year. The decrease is slight, and is attributable to unfavourable weather at the time of sowing.

4. *Character of the crop.*—It will be seen from the appended statement that out of the fifteen districts which grow early cotton, only two (Ranchi and Singhbhum) have estimated a normal crop. Balasore, Monghyr, Manbhum, and Hazaribagh have returned a crop of between 90 and 100 per cent., while four others (Palamau, Midnapore, Bhagalpur, and the Sonthal Parganas) anticipate an outturn of between 80 and 90 per cent. In the remaining five districts the estimate varies between 50 and 80 per cent. Taking the Province as a whole, the outturn this year promises to be much better than that obtained last year, and may be estimated at about 90 per cent. as against 64 per cent. estimated in 1899.

5. *Gross outturn.*—The total yield of the early cotton crop this year is estimated at 7,500,000 lbs. against 5,700,000 lbs. produced last year. The average yield of the six preceding years amounted to 6,500,000 lbs.

Orissa	Cuttack	2,203,260	1,161,300	2,100	3,000	3,100	100	95		

The decrease in area is due to the cultivation of some cotton lands with paddy.

Had not there been rain in October 1900, the crop would have been a bumper one.

Heavy rainfall at the beginning of October has damaged the crop to some extent.

Rains in July and August affected the outturn to a certain extent.

This crop was damaged to some extent owing to excessive rain, hence the estimated outturn is below the normal.

The excessive rainfall at the time of maturity of the crop in the month of September caused a reduction in the outturn.

The decrease in area is due to excessive rain at the time of sowing. The output was affected by high floods.

Low output is due to excessive rain.

The increase in the output is due to timely rainfall at the time of growth. The decrease in the area under this year's cotton crop is due to the fact that the people do not consider the cultivation to be very profitable.

Owing to the seasonable rainfall a normal output is expected this year. The figures in column 8 have been revised after careful enquiry by the Police. The decrease in area is due to want of sufficient rainfall in the "Adra Asiatien."

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS  
TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS  
TAKEN IN ASSAM, FOR THE MONTH OF NOVEMBER 1900.**

WEATHER during November was fine and settled with little or no interruption over both the Province and the Bay. Even in the extreme south, where monsoon conditions still obtain in ordinary years, there was no cyclonic disturbance, and the only appearance of a depression was in the early days of the month, when pressure fell briskly on the Madras coast. The depression which must have formed over the central parts of the south of the Bay became diffused on approaching the Madras coast, and caused cloudy weather with a few light showers over a wide area. The rainfall area extended slowly northwards, and the only rainfall recorded in the Province during the month occurred during the early days, and appears to have been caused by the above disturbance.

The showers in Orissa and South-West Bengal were barely measurable, but in East Bengal nearly a quarter of the normal amount for the month was received. Chota Nagpur, Bihar, and North Bengal were entirely rainless.

With the unbroken cloudless weather which became established after the first week and continued throughout the month, day temperature was steadily above the normal, and on an average for the whole month was in excess by considerable amounts. The greatest excess was  $3^{\circ}$  at Burdwan, Calcutta, Noakhali, and Chittagong. Owing probably to the westerly winds being more persistent than usual towards Burma, low night readings were most frequent at eastern stations and in the north of the Bay, the greatest defect being  $2^{\circ}$  to  $4^{\circ}$  in Arakan. Mean excess was  $1^{\circ}$  in Bihar, Chota Nagpur, and Assam, and about half a degree in Bengal Proper and Orissa.

At the beginning of the month pressure was above the normal at all stations, most so on the Madras coast, where excess was  $\cdot 1$  inch, and the area of lowest pressure was over the south of the Bay. The westerly winds at Madras stations showed an indraught towards a depression probably at no great distance from the coast as pressure had begun to fall there, but wind force was about average. The fall of pressure continued on the 2nd; and as a rise had begun in the east and north of the Bay, the depression was more to the west, but winds were still westerly on the Madras coast. The variation from normal pressure on that date ranged from less than  $\cdot 01$  inch in the south-west of the Bay to about  $\cdot 1$  inch in Assam. Heavy cloud had spread northwards from Burma, being fairly general in Bengal, and light showers fell at three stations in East Bengal. The westward motion of the depression ceased on the 3rd; pressure rose in the west and fell in the east, a change which continued more rapidly on the 4th, by which time all trace of the disturbance had ceased, except that a few showers were still falling in East Bengal. There was then a steep pressure gradient from north-west to south-east, and north-westerly winds generally prevailed over the Bay and the Province.

The relatively low pressure in the east with the accompanying westerly winds remained the chief feature during the subsequent week, and fine settled weather was general, except in the extreme south-west of the Bay, where heavy rain began on the 6th, but was of short duration. Temperature was practically normal during those days, except in Bengal Proper, where excess amounted to  $2^{\circ}$  or  $3^{\circ}$ .

Between the 11th and 17th pressure steadily but slowly increased, fine settled weather prevailed, and temperature was normal over the Province. After a brisk fall of pressure on the latter date the slow rise again set in; and temperature was more in excess in Bengal than at any other time during the month. These changes were, however, the oscillations usual in fine weather, but in the south it was not so settled, as rainfall was more heavy at Madras stations on the 19th and 20th.

There was no noticeable change over the Province or the north of the Bay till the 23rd, when a very shallow depression entered the western districts. It caused a slight increase of cloud, a faint cyclonic wind circulation, and a rise of temperature which was chiefly confined to the west of the Province. This slight disturbance ceased on the 25th, and the only change during the remaining days was a moderate fall of pressure which began in Assam on the 27th, caused a shallow depression along the foot of the Himalayas, with westerly or south-westerly winds on the 28th, and was followed by a rapid rise on the 29th. These changes were not accompanied by any increase of cloud, and the only rainfall during those days was at Sibsaigar. Temperature fell in the east, but, as during the greater part of the month, it remained above the normal in the western districts. On the last day of the month pressure, temperature, and winds were practically normal, and ordinary cold-season weather prevailed.

Pressure was practically normal for the month as a whole. Some slight excess is shown in Chota Nagpur and Orissa, and a defect rather larger in Bihar and North Bengal, differences which, though slight, probably account for winds being more southerly than usual in South Bihar.

Changes of pressure were of the oscillatory character usual in settled weather, and were small with one or two not very marked exceptions, the most noticeable being near the end of the month, when a depression formed over the northern districts for a day or two.

Temperature was generally high over the Province, more especially day temperature, as the cloudless weather was practically without interruption. The effect of this absence of cloud is shown in the average temperature for the month, which was at least  $1^{\circ}$  above the

normal in all districts, and in places by as much as 3°. This larger excess was in the southern districts of South-West and East Bengal.

Night temperature on an average for the month was in excess in the north-west of the Province only. Elsewhere there was defect increasing towards the south-east and greatest in Arakan. In the eastern districts of Bengal defect varied from 1° to 3°, and in South-West Bengal and Orissa, it was generally under 1°.

As already stated, mean excess was 1° in Bihar, Chota Nagpur, and Assam, and about half a degree in the other divisions.

Rainfall was practically nil. A few showers fell between the 2nd and 4th in Lower Bengal and Orissa, but the amounts registered were insignificant, except in East Bengal, where the heaviest falls were 1 inch at Lakhmipur in the Noakhali district, 1·27 inches at Bauphal in Backergunge, and 1·41 inches at Laksam in Tippera. East Bengal received 23 per cent. of the normal amount of 1·32 inches.

The following table gives in a condensed form the rainfall information for each of the six large meteorological divisions of Bengal for the present year up to the close of November. The numbers there given, as in the case of the former months of the year, are the actual average rainfalls in each division, expressed as a percentage of the normal fall for the period, and the last column also gives the total rainfall up to the close of November, expressed in the same way :—

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 1.6 lower; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards, is found to read 0.6 higher than the Kew Standard thermometer, which is the standard of reference at the present Observatory.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

#### *Final Report on the Winter Rice Crop in Bengal, 1900.*

*Character of the season.*—Appendix II of this report shows the rainfall of the season, i. e., from May to November 1900. The ante-monsoon showers commenced in April, but gave less than the normal rain both in that month and in the next over the greater part of the Province, though in South-West Bengal and in the Chota Nagpur Division the fall was unusually heavy. In June, the rainfall, though much interrupted, was not deficient on the whole. The rain in July was fairly continuous and well distributed, the only noticeable deficiency being in the Burdwan and Chota Nagpur Divisions. In August, the fall was badly distributed and was more or less in defect everywhere, except

in Orissa and the adjacent districts. The fall was much more copious and general in September, and in the Burdwan, Presidency and the Orissa Divisions it was exceptionally heavy. It ceased abruptly, however, in October, during which month there was very little rain anywhere, except in Orissa, while in November there was practically no rain at all. The season has on the whole been an unfavourable one for the winter rice crop.

*Area sown*.—The figures denoting the normal area under this crop have been revised by several District Officers since the submission of the preliminary forecast, with the result that the total normal area under winter rice now stands at 31,530,000 acres. Estimates of the area actually sown this year with winter rice have also been revised in some cases, in consequence of which the total of column 7 of Appendix I now shows 28,949,900 acres. The total area cultivated with winter rice last year amounted to 31,239,300 acres. The decrease in the area sown is mainly due to the want of rain at the time of sowing and transplanting.

*Character of the crop*.—From the abstract of the district returns contained in Appendix I, it will appear that only 9 districts out of 45 (Backergunge, Champaran, Muzaffarpur, Bhagalpur, the Sonthal Parganas, Ranchi, Palamau, Manbhum and Singhbhum) estimate an outturn of 100 per cent. or over. In 14 districts the crop is estimated at between 80 and 100 per cent., and in 20 districts it is estimated at between 50 and 80 per cent., while two only (the 24-Parganas and Patna) show an outturn below 50 per cent. On comparing the present estimates of the crop with those made in October last, it will be seen that prospects have improved in 15 districts, have remained unchanged in 10, and have deteriorated in 20. In my preliminary forecast in October last, I estimated that 88 per cent. (or 14 annas) of a normal crop would be harvested. According to the estimates now made by the District Officers, the outturn for the Province would not exceed 84 per cent. of the normal, but as there appears to me to be reasons to believe that some officers have underestimated the prospects of the crop, I am not inclined to make any change in my original estimate, and think we may count on harvesting 88 per cent. of the normal crop of the Province as a whole.

*Gross outturn*.—If the outturn reaches 88 per cent., as estimated by me, the gross outturn for the Province will amount to about 281,000,000 cwts. this year, as compared with an outturn of 310,000,000 cwts. in 1899.

Burdwan	Sadar ... ..	794,880	635,500	351,600	432,000	431,000	100	75	For want of timely rainfall some parts of thanas Shashibgunce, Ausgram, Galsi and Memari remained uncultivated. There was want of rain in July and August. In September the rain came too late and was too heavy. In the Kalna and Katwa subdivisions the rainfall was very badly distributed.

Heavy rain in September did much good to the high land paddy, but the cessation of rain in October was not favourable to the crop.

Bankura	Sadar ... ..	1,229,430	428,800	346,000	355,700	305,000	87	63	The rainfall during the latter part of September improved the condition of the aman paddy. The estimate shown in column 9 of the first forecast has therefore been changed.

Midnapore	Sadar ... ..	2,093,440	1,340,300	717,500	760,200	760,000	110	90	The estimate is considerably reduced owing to insufficient and untimely rainfall.

Hooghly	Sadar ... ..	252,880	176,800	115,000	111,600	90,000	120	70	The low percentage is due partly to the scanty rainfall both in the early and in the late part of the season and partly to the floods. The floods have damaged especially the paddy of Howrah and Uluberia.	
	Serampore ... ..	219,520	160,000	85,000	100,500	100,500	75	65

24-Parganas	Sadar ... ..	533,700	462,700	255,700	388,400	304,100	98	50	<p>The figures in column 3 do not include the Sundarbans. The total area of the district, including the Sundarbans, is 3,574,861 acres. The Sundarbans area in each subdivision is not known. Steps are being taken to ascertain it.</p> <p>The decrease in the outturn is due to the heavy floods on September 22nd, and following days, which greatly injured the paddy plants and totally destroyed the crop in low ill-drained lands. On the higher lands the crop has also suffered from want of rain in October. I think the outturn in Baraset and Basirhat must have been underestimated, but do not expect the district outturn to exceed 55 per cent.</p>
	Baraset ... ..	313,600	189,400	102,100	117,100	117,100	95	40

Nadia ...	Sadar ... ..	448,640	359,800	61,400	65,900	60,000	100	70	<p>The difference between the outturn shown in column 9, and that in the same column of the preliminary forecast is due to the floods of September last.</p> <p>I think the damage caused by the floods has been overestimated in Ranghat, and the benefit underestimated in Meherpur and Chudanga. The outturn for the district is probably little short of 70 per cent.</p>

Murshidabad.	Sadar ... ..	481,280	392,300	67,600	60,100	50,300	90	90	<p>The decrease in the estimated outturn of Lalbagh subdivision as compared with that shown in the preliminary forecast is partially due to the cyclonic weather in September and partly to the want of rain in October. In Jangipur it is due to the latter cause.</p> <p>The increase in area and outturn in the Kandi subdivision is due to a revision of the estimate after a careful enquiry.</p>

LIBERALITY OF BABU KAILASH CHANDRA ROY MOHASOY.

No. 3530L.S.-G., dated Calcutta, the 13th December 1900.

From—R. SHEEPHANKS, Esq., Under-Secy. to the Govt. of Bengal, Municipal Department,

To—The Commissioner of the Orissa Division.

I AM directed to acknowledge the receipt of your memorandum No. 263-S.-G., dated the 23rd November 1900, forwarding a copy of a letter from the Chairman of the District Board of Balasore, in which he reports that Babu Kailash Chandra Roy Mohasoy, zamindar of Dehurda, has given a donation of Rs. 2,500, the interest on which is to be utilised in making part payment of the salary of the pandit to be appointed for the *tol* which he proposes to establish at Dehurda on a permanent footing.

2. In reply, I am to request that you will be so good as to convey to the donor an expression of the Lieutenant-Governor's appreciation of his liberality and public spirit.

3. This letter will be published in the *Calcutta Gazette*.

# RESOLUTION ON THE ANNUAL REPORT OF THE MANAGEMENT OF THE ZOOLOGICAL GARDEN, CALCUTTA, FOR THE YEAR 1899-1900.

REVENUE DEPARTMENT—MISCELLANEOUS.

*Calcutta, the 18th December 1900.*

RESOLUTION—No. 3970.

READ—

The Report of the Honorary Committee for the Management of the Zoological Garden, Calcutta, for the year 1899-1900.

THE total receipts of the Garden were Rs. 52,970, which sum includes an opening balance of Rs. 8,225. The actual receipts during the year amounted to Rs. 44,145 as compared with Rs. 38,419 during 1898-99, and Rs. 39,557 during 1897-98. The increase was chiefly due to the liberal contributions aggregating Rs. 4,000 made to the funds of the Garden by His Excellency the Viceroy, His Highness the Nizam of Hyderabad, and Raja Benoy Krishna. The number of visitors who paid entrance money is shown below in comparison with the numbers since 1891-92:—

Year.	Number of visitors.	Year.	Number of visitors.
1891-92	... 118,382	1895-96	... 165,152
1892-93	... 139,173	1896-97	... 160,008
1893-94	... 162,449	1897-98	... 151,640
1894-95	... 154,532	1898-99	... 128,909
1899-1900	... 147,288		

In addition to these, students of different schools and children under age were admitted free of charge, and the Committee remark that the popularity of the Garden with the students and teachers of various educational institutions in Calcutta is not unnaturally increasing.

2 The total expenditure of the Garden increased from Rs. 36,925 to Rs. 46,682 during the year under report. The increase was due chiefly to larger expenditure by the amount of Rs. 3,412 on the purchase and transport of animals, and the remainder on the construction of the house for the smaller carnivora and in extra repairs. The year closed with a balance of Rs. 6,288.

3. The collection of animals in the Garden received an addition of 78 mammals, 299 birds and 91 reptiles during the year. These were obtained as gifts or on deposit, or by purchase, or by exchange with foreign Zoological Gardens. Only nine mammals and one bird were born in the Garden during the year. In compliance with the orders passed in the Government Resolution on last year's Report, the Committee have, for the first time, submitted the following table showing the number of animals in the Garden on the 31st March of each of the last four years:—

Year.	Mammals.	Birds.	Reptiles.	Gold fish.
1896-97	... 498	477	211	25
1897-98	... 443	491	146	25
1898-99	... 447	591	157	24
1899-1900	... 449	752	187	...

These figures show that, while there has been steady progress in the collection of birds, the numbers of mammals and reptiles have fallen off since 1896-97 for which no explanation is given. The Committee specially thank the Raja of Podma and Raja Ram Narain Singh Bahadur of Khyra, who each presented a well-grown tiger. The former also contributed one black and one ordinary leopard.

4. Towards the close of the year 1898-99, the Committee threw open the Sir Jotindro Mohan Tagore Garden Library, for the use of students of Zoology, but it is reported that few students availed themselves of this privilege. The Lieutenant-Governor hopes that as this concession becomes better known, students will avail themselves more fully of the advantage offered them.

5. The thanks of the Lieutenant-Governor are due to the President, Secretaries and Members of the Committee for their management of the Garden.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that a copy of it be forwarded to the Honorary Secretary, for the information of the Committee.

By order of the Lieutenant-Governor of Bengal,

F. A. SLACKE,

*Secretary to the Govt. of Bengal.*

*Final Report on the Bhadoi Crops of Bengal, 1900.*

*Explanatory.*—This report formerly included all kinds of *bhadoi* crops, and figures for jute, indigo, cotton, and *bhadoi til*, for which separate forecasts are issued by this Department were also given in it. With Government order No. 2369T.—R., dated the 3rd November last, instructions were received for the omission from *bhadoi* and *rabi* forecasts of all crops for which separate reports are issued. These orders have been carried out, and this is the first note on the *bhadoi* crops from which figures of jute, indigo, and *bhadoi til* have been excluded.

2. *Character of the season.*—The character of the season, up to the middle of September was described in the preliminary forecast of this crop, which was issued on the 20th September last. The rainfall in April and May was deficient in almost all parts of these Provinces, that in June and July, though more copious, was capriciously distributed, while in August there was again a deficiency. In September the fall was sufficient everywhere, and in the Presidency, Burdwan, and the Orissa Divisions it was exceptionally heavy. In October, however, the rains ceased abruptly, and there was very little rain anywhere, except in Orissa, during that month, while in November there has been practically no rain at all. The season has not, on the whole, been a favourable one for the *bhadoi* crops.

3. *Area sown.*—Excluding the areas sown with jute, indigo, and *bhadoi til*, the normal area under the different *bhadoi* crops in this Province now stands at 13,660,900 acres. The area cultivated this year with the *bhadoi* crops is 13,226,500 acres as against an area of 12,972,700 acres sown last year,

when the season was exceptionally unfavourable. The area under *bhadoi* food crops is estimated at 12,704,300 acres against 12,478,100 acres estimated last year.

4. *Outturn*.—It will be seen from the annexed abstract statement of the district returns that out of the 45 districts in the Province, only six districts (Saran, Malda, Hazaribagh, Ranchi, Manbhum, and Singhbhum) report a crop of 100 per cent or over; in nine districts (Rajshahi, Dinajpur, Darjeeling, Bogra, Patna, Champaran, Darbhanga, Angul, and Palamau) the outturn varies between 90 and 100 per cent., in 13 others it varies between 80 and 90 per cent.; in 14 others between 70 and 80 per cent.; while in the remaining three it varies between 50 and 70 per cent. Taking the Province as a whole, the District Officers estimate the outturn of the various *bhadoi* crops at 87 per cent. of a normal crop against a 65 per cent. crop estimated last year. In the preliminary forecast issued in September last, the total outturn was estimated by this Department at 92 per cent. of a normal crop, but this estimate must be slightly reduced in view of the unfavourable weather that has prevailed since it was originally framed, and I now think that the outturn of these crops should be estimated as 90 per cent. of the normal.

*Gross outturn*.—It is impossible to frame any approximate estimate of outturn for these *bhadoi* crops, except in the case of *bhadoi* rice. Taking 86 per cent. as representing the probable outturn of this crop, the gross outturn of cleaned *bhadoi* rice may be estimated at 48,346,900 cwts. as against 44,372,700 cwts. estimated last year.

Owing to deficient rainfall in August the  
outturn of bhadoi paddy has fallen short  
of the normal.

I am doubtful whether  
the normal area under  
bhadoi rice has been  
accurately stated,  
although it has been  
recently ascertained  
after special enquiry.  
I will ask the Collec-  
tor to check the  
figure still further.

The Collector has made special enquiries as to the actual areas shown in the past two years, and informs me that the present figures are correct.

The paddy crop was on the whole a fair one, but required a little more rain, as it was ripening.

The decrease in the outturn of certain crops as compared with the estimates given in the preliminary forecast is due to heavy rainfall in the beginning of October last.

The average fall of the corresponding period for 24 years, Surveyor-General's Office ... .. 65.22

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

NOTICE TO MARINERS—No. 150.

[First Publication.]

AFRICA, EAST COAST—DELAGOA BAY.

*Cockburn channel—Position of pile driver-lights.*

WITH reference to Notice to Mariners No. 108, dated the 27th April 1900, issued by this office, the British Admiralty has given further notice (No. 297 of 1900) that information, dated 18th April 1900, has been received from Commander A. E. A. Grant, H.M.S. *Raccoon*, that it is not intended to abandon the construction of the lighthouse on the Cockburn shoal, as a pile driving apparatus for constructing the lighthouse has been established about one cable south of Cockburn shoal buoy (black pyramidal), from which a *white fixed* light is exhibited.

As a *white fixed* light (indifferent) is also shown from the Pilot hulk, situated about 3 cables to the northward, mariners are cautioned not to mistake one for the other.

Approximate position, Pilot hulk, lat.  $25^{\circ} 53' 0''$  S., long.  $32^{\circ} 54' 5''$  E.

(Variation  $23^{\circ}$  Westerly in 1900.)

This Notice affects the following Admiralty Charts:—*Tugela river to Delagoa bay*, No. 2089; *Delagoa bay*, No. 644; *Also, Africa Pilot, Part III, 1897, page 190.*

## NEW ZEALAND, SOUTH—OTAGO HARBOUR.

*Beacons, buoys, lights, &c.*

THE British Admiralty has given notice (No. 298 of 1900) that the following information, dated 29th March 1900, has been received from Commander R. G. O. Tupper, H.M.S. *Pyldes*, respecting the beacons, buoys, and lights, &c., in Otago harbour:—

1. The light (*fixed red*) shown from the beacon at the Pilot station, Tairaroa head, has been discontinued.

Approximate position, lat.  $45^{\circ} 47'$  S., long.  $170^{\circ} 45'$  E.

2. A black buoy has been moored to mark the edge of the bank, which has extended off Williams point, with the eastern extreme of Taylor point bearing N.  $32^{\circ}$  W., distant one-third of a mile, and Acheron head S.  $61^{\circ}$  W.

Approximate position, lat  $45^{\circ} 48' 0''$  S., long.  $170^{\circ} 41' 35''$  E.

3. The black buoy on the southern side of the channel near Acheron head is situated about 2 cables farther to the eastward than given on the Chart, or with Acheron head bearing N.  $37^{\circ}$  W., distant  $1\frac{1}{2}$  cables, and Rocky point S.  $53^{\circ}$  W.
4. The light ("F. 15 feet") on the edge of the bank marked "Sand, mud, and shells" is placed on the Chart about 3 cables to the eastward of its proper position; it is situated with Acheron head bearing N.  $31^{\circ}$  E., distant 3 cables, and north extreme of Deborah bay N.  $61^{\circ}$  W.
5. A powder magazine, which is conspicuous, stands on piles erected on "Sand, mud, and shells" bank with Rocky point bearing S.  $87^{\circ}$  W., distant  $4\frac{1}{2}$  cables, and Bowen pier S.  $32^{\circ}$  W.
6. A black beacon marks the eastern side of the channel off port Chalmers, situated with Bowen pier head bearing S.  $71^{\circ}$  W., distant  $2\frac{1}{2}$  cables, and Rocky point N.  $32^{\circ}$  W.
7. The two beacons situated 11 and 12 cables respectively S.  $26^{\circ}$  E. of Rocky point no longer exist.

(Variation  $16^{\circ}$  Easterly in 1900.)

This Notice affects the following Admiralty Chart:—*Otago harbour*, No. 2411; *Also, List of Lights, Part VI, 1900, Nos. 1484, 1486; New Zealand Pilot, 1891, page 306; and Hydrographic Notice No. 2 of 1895, relating to that work, page 11.*
